Direct current (DC) is the flow of electric charge in only one direction. It is the steady state of a constant-voltage circuit. Most well-known applications, however, use a time-varying voltage source. Alternating current (AC) is the flow of electric charge that periodically reverses direction.

### **Alternating Current versus Direct Current - College Physics**

AC vs. DC (Alternating Current vs. Direct Current) Electricity flows in two ways: either in an alternating current (AC) or in a direct current (DC). Electricity or "current" is nothing but the movement of electrons through a conductor, like a wire. The difference between AC and DC lies in the direction in which the electrons flow.

High frequency is a type of current that is used on acneic skin to speed the healing of active breakouts and on very oily skin to dry out the skin. It has a germicidal and healing effect on skin. Unlike galvanic, high frequency uses a different type of current - an alternating current (also called Tesla pulse current).
